Summary

Computer Engineering graduate specializing in Machine Learning, Data Science, and GenAI, with experience building real-world systems from edge/IoT solutions to multi-agent AI applications. Interested in financial markets, with experience independently researching companies, financial data, and valuations to support investment decisions. Seeking an entry-level role in AI/ML, Software Development, or FinTech

Education

University of Mumbai – B.E. in Computer Engineering Nov 2022 – May 2026

Experience

FlyRank AI | *Machine Learning Engineering Intern (Remote)* Jul 2026 – Aug 2026

- Working through FlyRank's applied ML program using anonymized search-ranking data, performing data cleaning, feature engineering, and training classification models including Logistic Regression, Decision Tree, and Random Forest to identify pages for content refresh.

Prodigy Infotech | *Web Development Intern* Dec 2023 – Jan 2024

- Built and deployed responsive web applications using HTML, CSS, JavaScript, and REST APIs, ensuring cross-browser compatibility and consistent performance across devices.

Projects

AquaSense Edge | *IoT Aquaculture Monitoring Platform* | *Industry Collaboration*

- Built a real-time IoT monitoring system on an ESP32 + Raspberry Pi stack, tracking 5+ aquaculture parameters with local storage and live dashboard visualization.
- Transitioned fish-length estimation to AprilTag-based measurement, cutting calibration time by 70%, and integrated an RNN pipeline for early anomaly detection.

AgenticResearch | *Autonomous AI Research Automation Tool* [GitHub](#)

- Built a LangChain multi-agent pipeline (Search, Reader, Writer, Critic) with Tavily web search and BeautifulSoup extraction for real-time research automation.
- Delivered an interactive Streamlit dashboard with live agent monitoring, execution tracking, and downloadable reports.

StockAnalyzer | *Stock Comparison & Analysis Platform* [GitHub](#)

- Built a FastAPI + Next.js platform with SMA20/50 trend analysis, Buy/Sell/Hold signals, news-sentiment classification, and multi-stock comparison dashboards.
- Developed a Python backtesting module for an SMA/RSI strategy, reporting returns, max drawdown, win rate, and trade-level results.

Certifications

IBM Data Fundamentals [Credential Link](#)

Udemy – Data Science, ML, DL & NLP [Credential Link](#)

AWS Cloud Practitioner Essentials [Credential Link](#)

Technical Skills

Programming & Web: Python, SQL, JavaScript, TypeScript, C, HTML/CSS, Node.js, Express.js, FastAPI, Flask, REST APIs

AI, ML & Generative AI: NumPy, Pandas, Scikit-learn, TensorFlow, Keras, Deep Learning, NLP, Time-Series Analysis, Feature Engineering, EDA, LangChain, RAG, Prompt Engineering, Vector Databases (ChromaDB, Pinecone), LLM Fine-Tuning, Agents & Tool Use, LlamaIndex, Hugging Face

Cloud, DevOps & Databases: AWS, Google Cloud, Docker, Kubernetes, Firebase, MongoDB, MySQL, Git, GitHub, CI/CD, Power BI
